## DETAILED ACTION

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 14 July 2005 has been entered.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 8 and 10 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

There is no support for the invention of the new scope of claims 8 and 10, as covered by amendment to claim 8. The specification discloses two different embodiments: page 22, line 25 and page 27, line 25. And Page 27, lines 30-31 indicates (and the explanation on the subsequent pages) that the different feed speeds

(as now required by the claims) is “different” from the rest of claim 8 (e.g. the inequality of step c). Still further, as per figure 8,  $L1/(I1+I2)$  is a constant value for each run of the first embodiment. If the feed speed varies (page 29, lines 26-31), then the L1 and L2 values would also change –and thus result in non-constant values. Thus the description does not reasonably convey that the inventors had possession of the present claimed invention.

***Claim Rejections - 35 USC § 103***

Claims 8 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Berkey 5917109 in view of Baumgart 4820320 of Dobbins 6301934.

See the prior office action for the reasoning as to why the claims are obvious; but such does not account for the changing speeds as now claimed. Dobbins discloses changing the feeding speeds so as to decrease dispersion of the final fiber; see Dobbins, col. 1, lines 22-48 and col. 2, lines 60-64. It would have been obvious to change the Berkey method by changing the feeding rates as taught by Dobbins so as to create a fiber with decreased dispersion.

***Response to Arguments***

Applicant's arguments filed 16 May 2005 have been fully considered but they are not persuasive because they are moot in light of the new grounds of rejection. Whereas the arguments point out support for the new limitations – they do not point out support for the present scope which includes the limitations of the first embodiment.
